Your Trust

We have been in the precious metal business for more than 50 years and aiming to only one target ever since:

This target comes along with the absolute effort for creating added value to our work and for our clients by questioning ourselves every day.

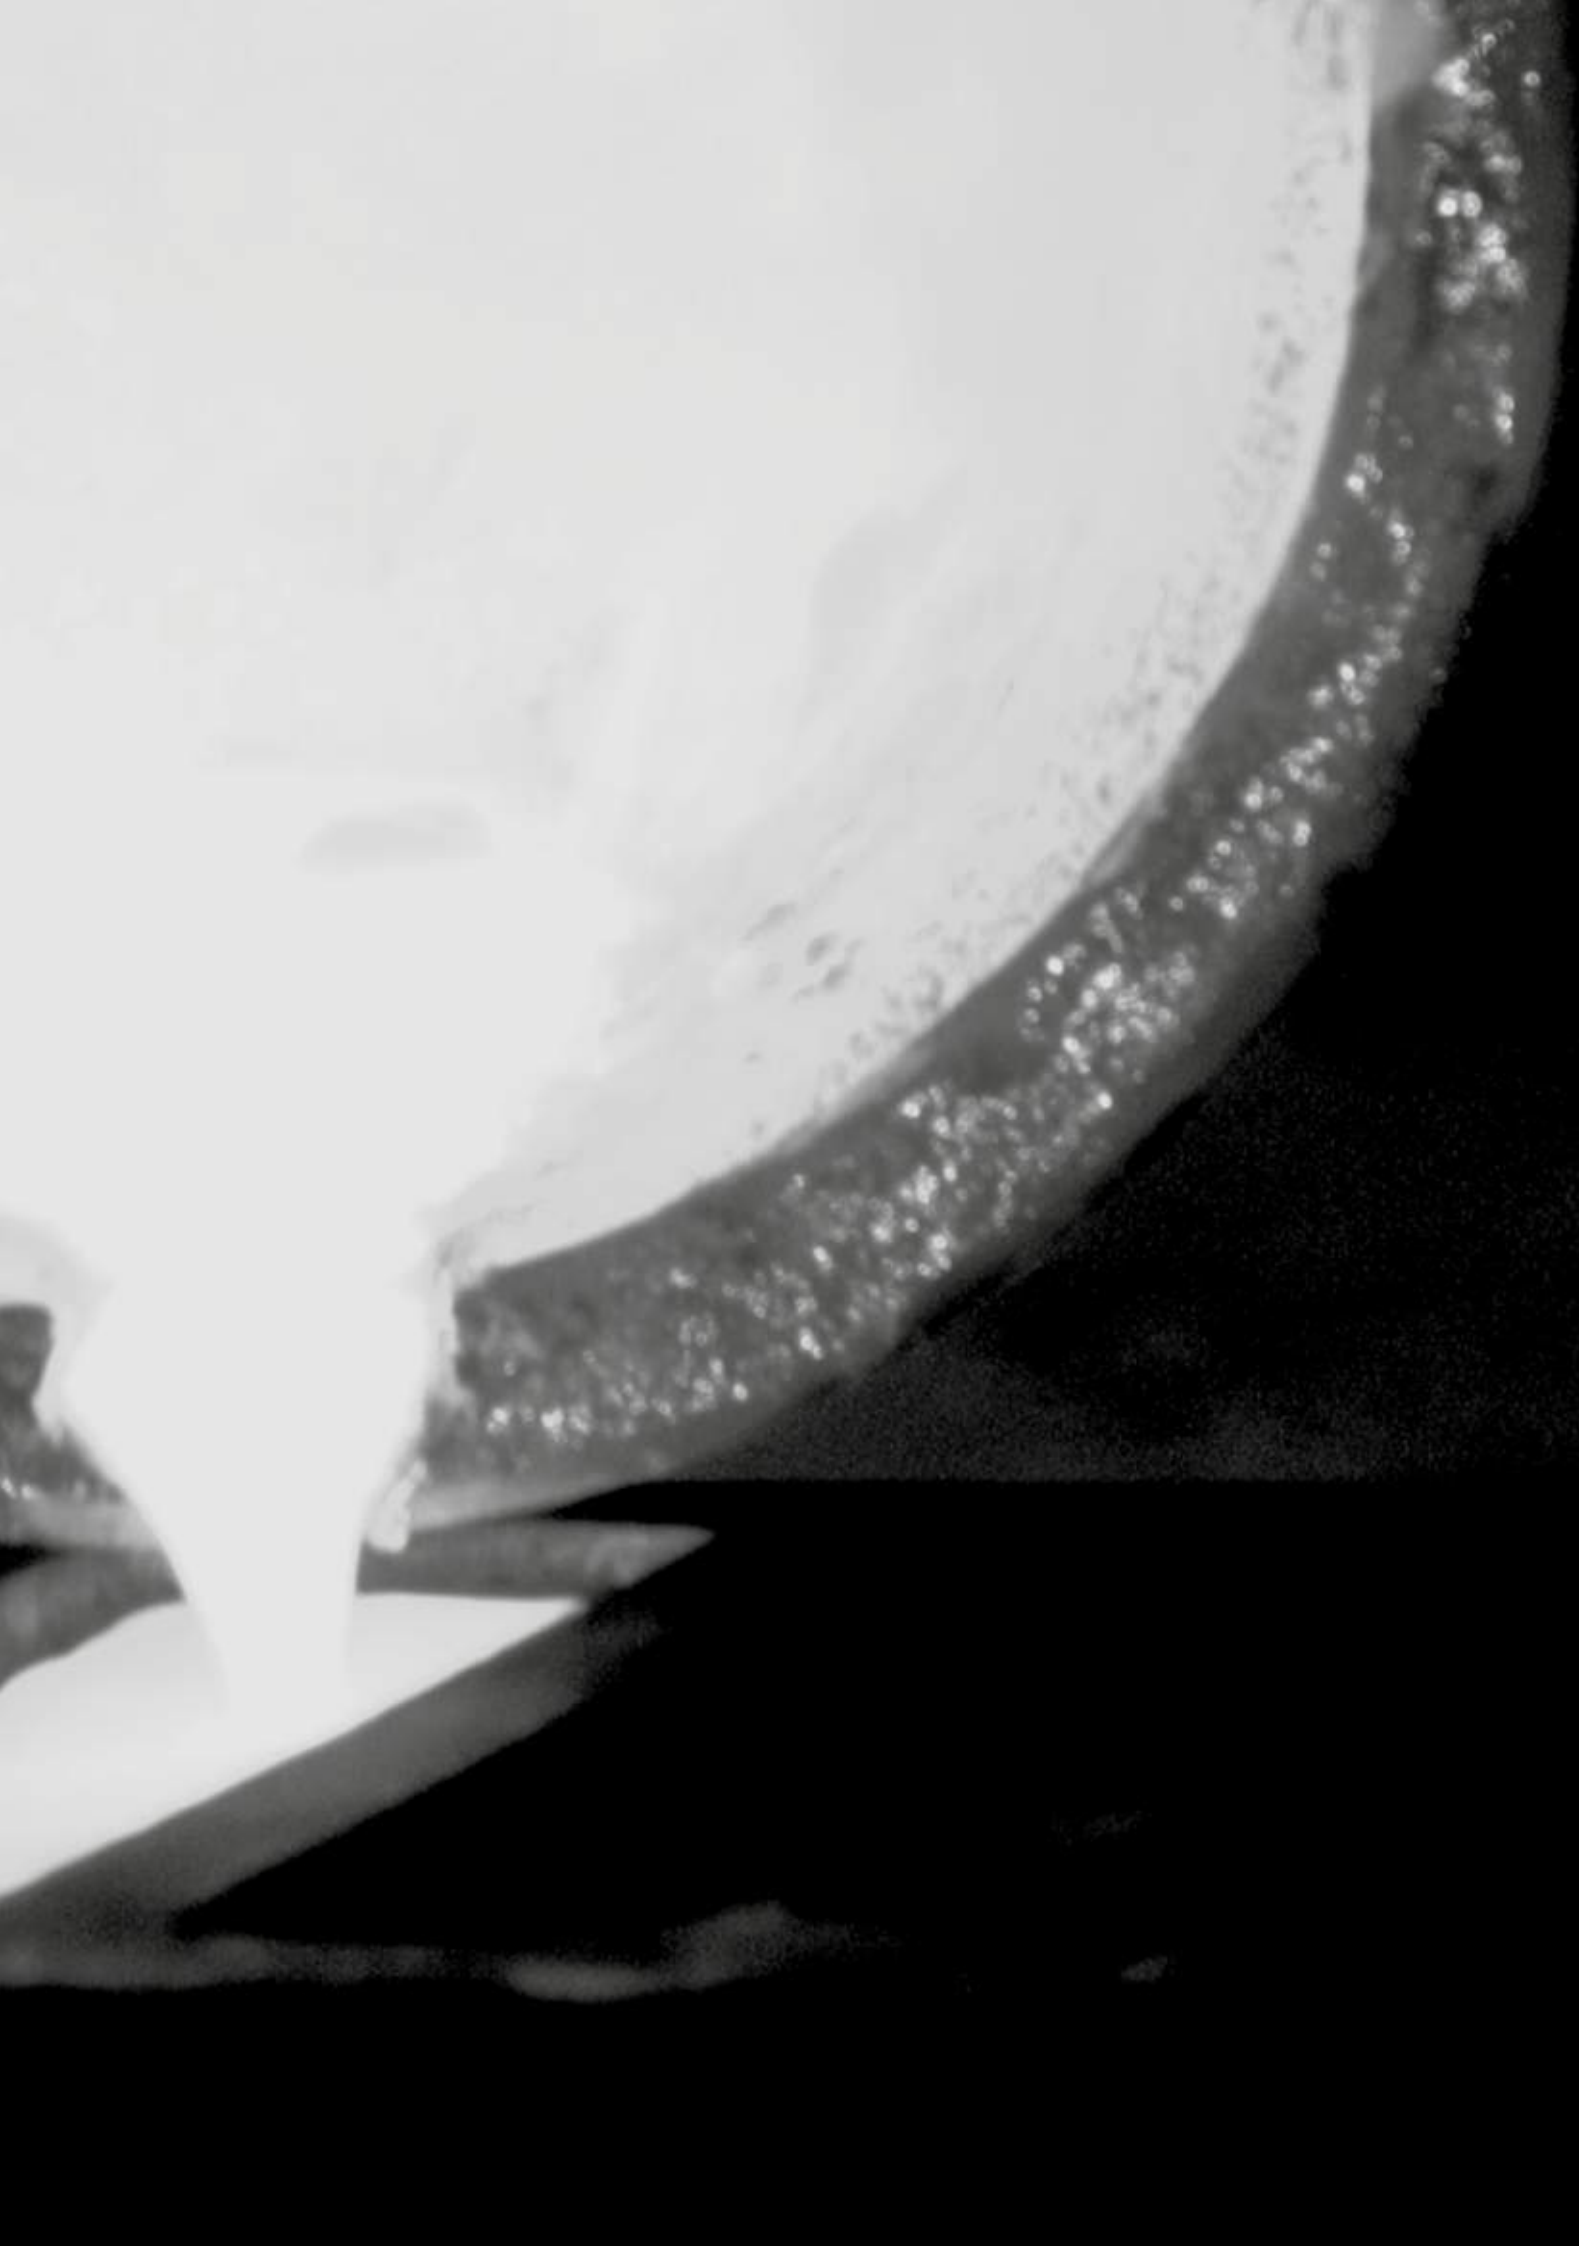

The reason why we are one of the key players in today's dynamic and constantly evolving sector is because we keep focusing on these targets and values under all conditions.

We process, on average, 125 tons of gold, 250 tons of silver annually. Having high technology by itself is not enough to process this volume of precious metals – it also requires honesty, reliability and perfection in quality.

We are on the Good Delivery list of LBMA – London Bullion Market Association for gold and silver, foreign member of SBMA-Singapore Bullion Market Association, member of SGEI- Shanghai International Gold Exchange and accredited refinery for gold and silver at BIST – Borsa Istanbul, Approved Brand at COMEX and our gold, silver products are accepted by many more precious metal organizations, institutions across the globe.

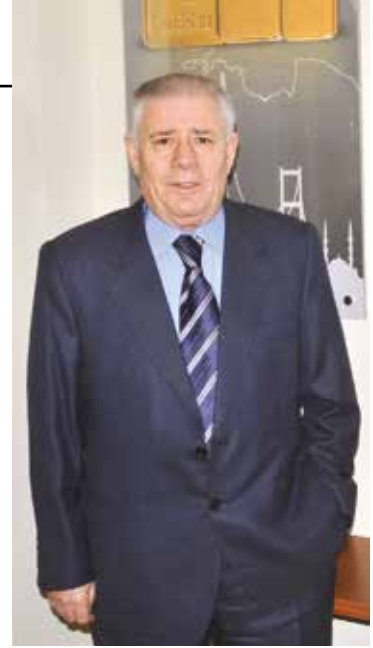

But most importantly, we have your confidence, just like the day we started this business.

How We Started?

In 1967, **Nadir Tütüncü** established his workshop within an area of 150 m2 to recycle jeweler dross. Beginning from 1975, he started precious metal refining for the market and the workshop increased in size limited to this field. In 1985, he established Nadir Trading and began to trade precious metals in Grand Bazaar. Then, Nadir Metal Rafineri San. ve Tic. Ltd. was established in 1993. Rapid increase in demand has forced the company on capacity investment. Thus, the first gold refinery in Turkey was built on the country's land.

In 1999, a partnership agreement with the German company Degussa Allgemeine was signed in exchange for technology “know-how” and thereby Nadir Allgemeine Ind.Trade.Co.Ltd. was established. In 2001, Nadir Family became the sole shareholder of the company which continued its operations under the name of Nadir Metal Rafineri San. ve Tic. Ltd. After the accretion agreement in 2001, all the infrastructural investments were completed within a year. In 2006, Nadir became a joint stock company with its new title: Nadir Metal Rafineri San ve Tic. A.Ş.

The company is accredited by **Borsa Istanbul (BIST)** in 2008 for gold and silver, by **London Good Delivery Association (LBMA)** in 2011 for gold, as the first company in Turkey, in 2012 for silver as the only company in Turkey, as foreign member at **Singapore Bullion Market Association (SBMA)** in 2016, as member at **Shanghai International Gold Exchange and Approved Brand at COMEX** in 2020.

Today, along with refining, waste recycling, dross and laboratory services, Nadir Metal produces gold and silver, trades gold, silver, platinum, palladium and rhodium. In addition to these, “Nadir Metal” and “Nadir Gold” branded small bars of gold and silver products and exclusive collections are produced.

Add (+) Value

We strive to add value to our business,
your business briefly to life.

Nowadays, where the competitive environment is felt more, it is not enough to produce the best, to give the best service or to create more employment, on its own. In order to create added value in the global market you need to be able to present new strategies and a point of difference. Because in this way we believe that we will be able to contribute added value to both ourselves, our employees, our business partners and our customers.

Alongside this strategy, by creating difference and contributing added value we know that we will be able to increase the quality and the growth rate of regional markets.

As a professional, longstanding, difference creating and value adding company the solutions we present to all our customers always enables maximum profits and the desired levels of business.

quality service

(+) VALUE

Precisely produced
“products with a
high brand equity”

We offer a wide range of products, of which gold and silver are the main commodities. We have the ability to produce gold at a purity of 999.9. But we are well aware that the value of the product is not just determined by it's purity. Our only goal is to contribute added value by creating faultless products, using our quality standards at every stage of production. In our business we strive for **excellence** at each stage of the processing of our precious metals.

An essential issue for us and for you

- High Reliability

At Nadir Metal, we never compromise on product safety — just as we never compromise on quality. Another area where we lead and innovate in Türkiye is security. Our products incorporate several distinct security features, as outlined below. The PVC structures of the certificates for 1g, 2.5g, and 5g bars differ from those of higher denominations such as 10g, 20g, 1oz, 50g, 100g, and so on. However, all PVC structures maintain the same level of security quality.

International standards, high-level security;

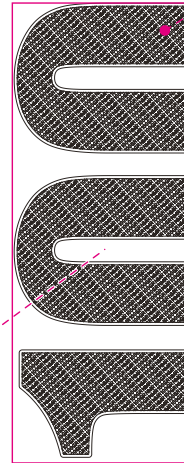

ENCIPHERMENT

The letter “N” in the NADiR logo contains the word “NADiR” itself written in a smaller font inside it.

When the certificate is rotated in any direction (right, left, up, or down) the logo on the physical gold appears in different colors.

Thanks to the high-quality, specially engineered PVC construction of our certificates, it is impossible to access the physical gold inside without cutting or otherwise damaging the PVC.

Inside the numerals indicating the product's weight, the inscription “NMR” together with the weight value (e.g. NMR100GR-NMR100GR...) is embedded using micro-engraving technology, visible only with a magnifying lens. (See the enlarged image above.)

This is the original product hologram. The hologram itself contains multiple security verification features known only to Nadir Metal Refinery — we do not disclose them publicly.

A unique serial number is printed on both the certificate and the bar, and the numbers match exactly. However, for the 1-gram bar, the certificate carries a serial number, while the physical gold itself does not bear one.
